PHYSICAL THERAPISTS NYC

MANHATTAN'S PREMIER PHYSICAL
THERAPY CENTER

- Personalized rehabilitation care
- Physicians and therapists coordinated care
- Hands-on, one-on-one outpatient therapy

WHY CHOOSE US?

From the moment you walk in our door, you'll discover our approach is different. Our highly skilled physical therapists will create a comprehensive recovery plan, discuss what recovery looks like from your point of view to ensure the **best physical therapy** outcomes. Then, together, you'll map a plan of progress and determine how best to achieve your treatment goals.

Hands-On Physical Therapy – No two patients are alike, which is why your treatment plan is customized to fit your end goals, your strengths, and your limitations. Through hands-on care you will achieve incredible results.

Cutting Edge Techniques – Continuing education is a critical step in progressive care. Our therapists not only pursue advanced certifications and new techniques, they're often leaders in their field and asked to lecture on their accomplishments.

State-of-the-Art Facility – There are no shortcuts when it comes to our well-appointed facility. We believe that having the best equipment at your disposal gives you the best odds for a full recovery.

Dedicated Staff – While our physical therapists often get well-deserved praise for their commitment to each patient and to achieving desired recovery outcomes, our entire staff plays a key role in your care. We built our reputation on their commitment to your needs.

THERAPIES WE OFFER

www.physicaltherapistsnyc.com

MANUAL THERAPY

This is a hands-on treatment that is designed to work on areas of pain and disability. Manual physical therapy can include massage techniques, manipulation of muscles, and joint mobilization.

LASER THERAPY

Physical therapists use lasers that produce a cold effect and/or ones that provide a warming effect. Both types of lasers provide pain relief and aid in healing of musculoskeletal conditions.

OCCUPATIONAL THERAPY

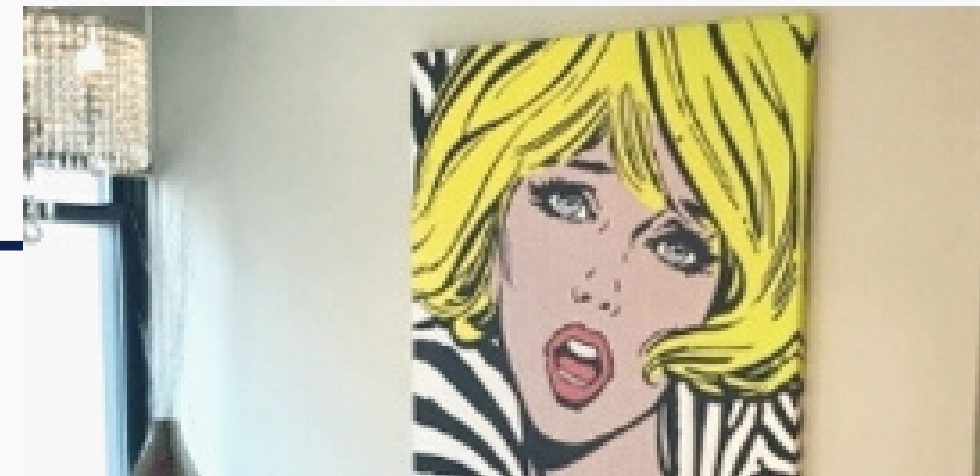

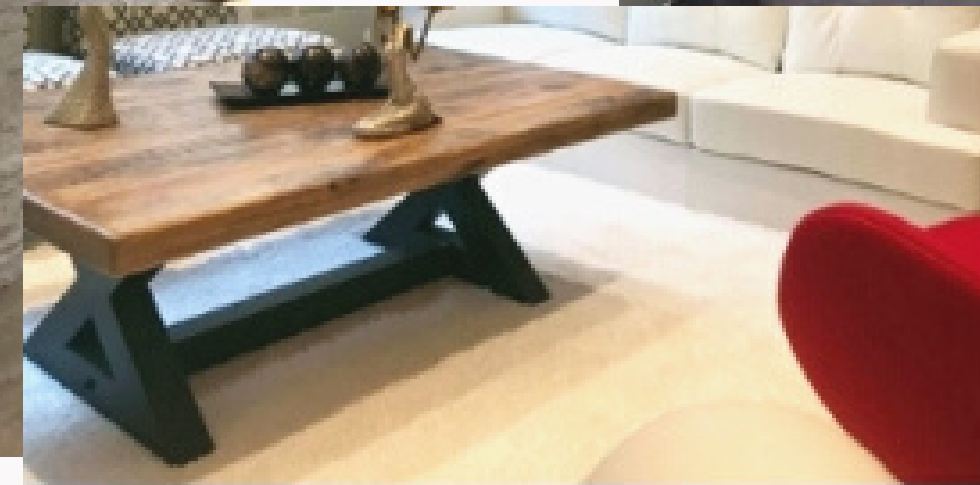

Whether you were in an accident, developed long term chronic pain, sports injury or your overall motor skills have just diminished we are able to help recover and restore your natural functions.

PHYSICAL THERAPY SERVICES & PROGRAMS

Our patients travel from all over New York City to visit our state-of-the-art pain relief center because they know that we understand the recovery process from A to Z. Our equipment and pain management techniques are totally holistic and patient-centered. We know and understand the difficult process after an accident and this is why we have helped countless from our area.

We work with athletes in sports therapy to help recover from injuries in the lower back, elbows, knees, and shoulders.

Suffering from issues of dizziness and balance? Our Vestibular rehabilitation program is one of the top in the city.

Spinal & Joint Manipulation

If you've been prescribed physical therapy with spinal and joints manipulation, you might be wondering why you're not being sent to a chiropractor. At our clinic, we have access to chiropractors in our facility and you can be seen by one if that's what you'd like (is this true?), but it's not necessary if your prescription is for physical therapy manipulations and not chiropractic ones. There is a difference, and we'll explain that further below.
