Concept Design

OUR SERVICES

Conceptual Ship design

SENA SHIP DESIGN develop the concept design for the ship owner in order to be able to check the required investment and the feasibility of the intended vessel concept. The starting point for the feasibility study is usually the client's business plan or basic description of the vessel.

Basic Ship design

SENA SHIP DESIGN provides basic design package documentation to develop the project in order to achieve approvals from the classification society, flag state, other related authorities. Includes a full set of construction and outfit plans, which enable the shipyard to build the vessel exactly to the owner's specification.

Detail Ship design

We are offering complete detailed design and production information packages for any vessel design, we Working in close contact with our clients, putting great effort in their work to assure quality of the delivered engineering package.

Conversions & modifications

we provide conversions and modifications engineering services for the ship owners contemplating to existing vessels. We are working with all of the major classification societies producing the necessary documentation for design approval on a variety of conversion or modification projects.

SUPERVISION & Project Management

During the construction process, conversions, repairs or refitting, SENAS SHIP DESIGN can provide build supervision on behalf of the Client, for quality and schedule controls to prevent from poor quality work and/or delays from shipyards.

MARINE SURVEY
